THE SSES SERIES PART 1: CCTV INSPECTIONS

Prism is an expert in closed circuit television (CCTV) inspections. Our team of professionals can assess any aging utility system in your infrastructure and identify problematic areas to help you to get the best return on your investment.

Our CCTV services include on right-of-way and off right-of-way inspection, technical assessment of observed conditions, report preparation and digital copies of videos and images. We can also put together a comprehensive list

with an accompanying cost estimate to help you better prepare for future budgets. The key to obtaining more funds is in accurately identifying the problem areas and making recommendations for repair. Knowledge is power and we give that to you the second we step on site.

Prism is staffed by highly qualified CCTV Inspectors who have decades of experience conducting CCTV inspections. All of whom are certified through NASSCO's Pipeline and Lateral Assessment Certification Program (PACP/LACP) and every inspection is conducted in accordance with these standards. Prism also has trained professionals certified to offer NASSCO Certification Classes.

INSPECTION EQUIPMENT

We use a variety of technologies and products to ensure video quality that allows our customers to easily identify the smallest of defects. Our state of the art cleaning and CCTV equipment ensures we can handle any situation for any pipe size. While our WinCan software transforms the raw data captured by our cameras into the intelligence you need to make maintenance decisions. Each of our cameras are inspected, cleaned and maintained to ensure proper functionality. We can inspect up to 1000 LF in one direction at any time.
